North Norway comment

European Parliament Resolution on an integrated Arctic (2016/2228(INI))

The three northernmost Norwegian counties – Nordland, Finnmark – would like to address some of the issues raised in an integrated European Union policy for the Arctic, i paragraphs 13, 14 and 41.

We find these paragraphs highly problematic, and we stro European Parliament to delete them in the plenary vote on

13. *Calls on the Member States to ban fossil fuel subsidies, the cost of fossil fuel energy production, with a view to discouraging exploitation and use of fossil fuels; urges the Commission Member States to work in international fora towards a ban on Arctic oil and gas in order to achieve the goal of a low-carbon economy;*
14. *Calls on the EU to promote strict precautionary regulation of environmental protection and safety for oil exploration, internationally; calls for a ban on oil drilling in the icy Arctic for promotion by the EU of comparable precautionary strict Arctic coastal states;*
41. *Stresses that Arctic waters are vulnerable to the offshore will contribute and accelerate the climate change threat; EU must cooperate with international partners to put an end to Arctic waters;*

Energy production in Norway is considered as a vital national activity, and the European Parliament addresses energy production

The geographical area of "Arctic" is not defined in the report. We would like to determine the scope of the paragraphs. The difference in conditions between Canada and the Arctic coast of Norway entails that you need a different approach. **The Arctic is not one conform area.**

North Norway comments on the:

Brussels, 21 September 2017

International ocean governance report: an agenda for the future of our oceans in the context of the 2030 SDGs (2017/2055(INI))

The three northernmost counties in Norway would like to comment on the draft report on International Ocean Governance. We find the Draft Report to be very good and are happy with several of the points raised. Healthy oceans and seas are vital for local coastal communities in our region, and we are therefore glad to see that the European Parliament wants to accelerate the fight against marine litter and plastic, as well as strengthen international ocean research and cooperation.

We would like to draw your attention to a few clauses and amendments that concern us.

- First, we enthusiastically support paragraph 9, which appeals for an action plan for the Arctic that draws on the *Integrated EU policy for the Arctic* (March 2017).
- We therefore strongly support Amendment 111, which incorporates "active dialogue with the Arctic Council" into the paragraph, and would further suggest adding "and with local communities".

Second, in North Norway we build our future on blue economy and sustainable use of marine resources, but part of our local livelihoods is still based on energy production from oil and gas.

- We are thus concerned about amendment 94 proposing an "imposition of an international moratorium on oil or gas extraction and on prospecting with a view to oil or gas extraction in the high seas".

Energy production in Norway is considered a vital national and regional interest. Particularly important are the developments in the Barents Sea and Norwegian Sea, which have contributed to an improved economy in local communities, further reducing the depletion of inhabitants from our sparsely populated region. We argue that a possible moratorium would have dire consequences for European energy supply. After all, Norwegian gas export covers over 20% of the total European consumption. Moreover, it would severely affect the right of local communities to decide on their own development and future.

Finally, we agree that we must achieve a just transition away from offshore drilling and thus contribute to the goal of a low-carbon economy, as proposed in amendment 181. However, this transition should be made over time and led by local communities with knowledge and expertise in the specifics. With regard to amendment 182, we would like to point out that in our region all licenses for oil and gas exploration must already follow strict national safety and environmental regulations.

Based on the above-mentioned, we would highly appreciate if you would take these comments into consideration when finalizing the report.

On behalf of Finnmark, Troms and Nordland counties,

Yours Sincerely,

Torjus Kleiven Kandal
Acting Director, North Norway European Office

Arktis løftes frem i Regjeringens nye EU-strategi

Utenriksministeren i Brussel: – Arktis en viktig del av dialogen med EU

Differensiert arbeidsgiveravgift

- Fortsatt støtte til områder med særlig utfordringer
- EUs ytre regioner og de spredt befolkede regionene i Nordområdene er likestilt i strukturfondene som egen kategori
- Kan tyde på at Norges regionalpolitiske handlingsrom opprettholdes.
- Men detaljene må gjennomgås.

(4) The outermost regions and the northern sparsely populated regions should benefit from specific measures and from additional funding pursuant to Article 349 of the TFEU and Article 2 of Protocol No 6 to the 1994 Act of Accession.

Interreg er EUs program for å fremme sosial og økonomisk integrasjon over landegrensene gjennom regionalt samarbeid.

THE COPPER MINE

Underground mining for the copper ores at **Nussir** and **Ulveryggen**

Nussir is **Norway's largest copper deposit**. So far, 72 million tonnes of mineralisation have been detected with just above 1% copper.

The Nussir ore also contains other valuable metals such as **silver** and **gold**. They are extracted along with the copper.

All ore extraction will take place underground and will be transported out into tunnels to nearby **established and regulated industrial areas** by the sea.

Mining operations will have approximately **150 people at work in Repparfjord**. In addition, experience shows that around hundred people will be providing services based in the local community.

WIDER ECONOMIC IMPACTS
